

SITUATE: MACHINE LEARNING FOR IMAGE RECOGNITION

By: Bryan Lee and Robin Tan
ASE 2016

Introduction

Why Image Recognition?

Why is Image Recognition Difficult?

What is Machine Learning?

*An **algorithm** with the ability to learn **without** being **explicitly programmed***

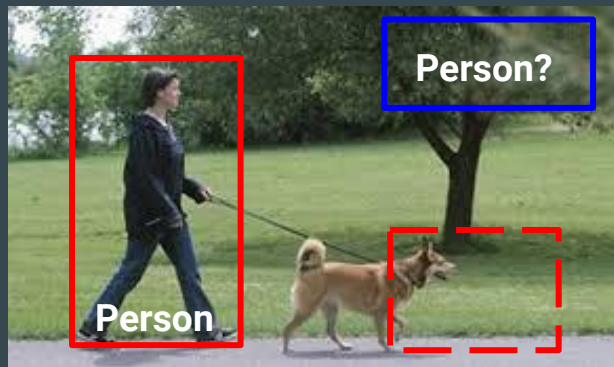

Situate : Information and Goals

*Locate objects relevant to situation
as quickly as possible*

Situate : Overview

Dog Walking

Bounding Boxes

Object Proposals

Oracle

Intersection-over-Union

Using Context

Project Goals

Problem 1

Generalize Situate

Problem 2

Improve Box Proposals

Problem 3

Accurately Identify Object
in the box

Machine Learning Methods

Support Vector Machines

Neural Networks

Situate : User Interface

[Goal 1] *Situate* : New Situations

Handshaking

Ping Pong

[Goal 1.5] Wall Cleaning

[Goal 2] Improve Box Proposals

Goal 2

Problem 1: Where to propose the box?

Box Proposals based on
Saliency

Prior knowledge on object location

Goal 2

Note: Additional research on partial boxes

Goal 2

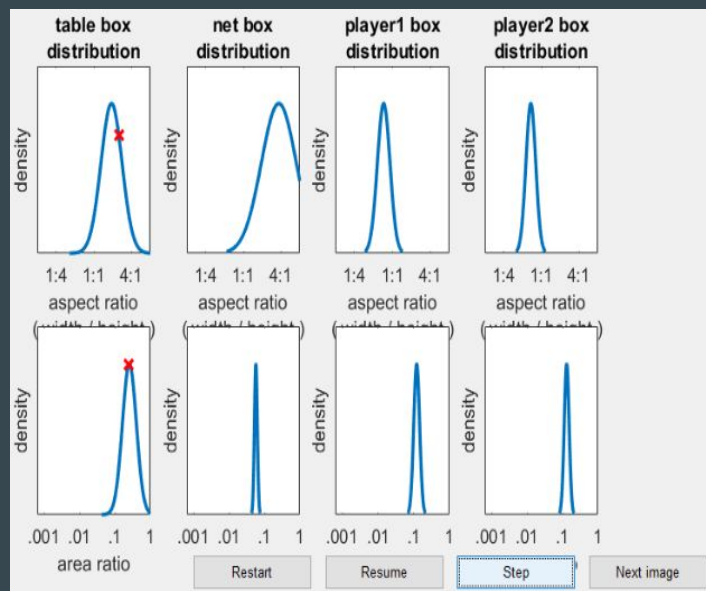

Problem 2: What size should the box be?

Handshaking

Ping Pong Playing

Problem 3: What object do we propose?

Handshaking

Person-left

	PL	PR	HS
Probability of object proposal	15%	15%	70%

Ping Pong

Table

	P1	P2	T	N
Probability of object proposal	27%	27%	40%	6%

Goal 2

Testing

Overview:

Collected Images

90% Training

10%

Testing

Training Set:

Handshaking

360 Images

Ping Pong

270 Images

Test Set:

40 Images

30 Images

Repeated **10** times

Goal 2

Results: Handshaking

Percentage Successful

	Handshake
Provisional	90%
No Provisional	85%
Prioritized Objects	99%

(Successful = all objects localized within 1000 iterations)

Goal 2

Results: Ping Pong

Percentage Successful

	Ping Pong
Provisional	90%
No Provisional	87%
Prioritized Objects	99%

(Successful = all objects localized within 1000 iterations)

Goal 2

[Goal 3] Improve Object Recognition

We used a CNN-SVM to identify the object within a box

Goal 3

Conclusion

New Situations

- Successfully expanded *Situate* to two new situations.

Handshaking

Ping Pong Playing

Improve Box Proposals

- Demonstrated *Situate*'s improved box proposal methods.
- Improved results with prioritized object detection.

Improve Object Recognition

- Implemented object identification without relying on ground truth boxes

"Player 1!"

Thank you for listening

Do you have any questions?

Object Recognition: Brief Overview

What is Object Recognition?

Motivation

Convolutional Neural Network (CNN)

Scans Input Image for Features
(Corners, Edges, Shapes, etc.)

Inputs to a “Neural Network”
(Combines information from features)

Outputs a Classification
(Person Left, Person Right, Handshake)

“Not an Object”

Goal 2
